

Adding a New Intervention Letter

The Intervention Letters Manager enables you to add, edit, delete and print letter templates, which you can use to liaise with a third party, such as a nurse, GP or specialist, regarding a patient intervention.

 Intervention letter templates are only available for anticoagulant therapy, lithium therapy and prescription interventions.

1. You can access the Interventions Manager from the top left-hand corner of the ProScript Connect Main Screen, by clicking **ProScript Connect** > **Interventions**.
2. From the Interventions Manager, highlight either an anticoagulant therapy, lithium therapy or prescription intervention in the grid and press **[F4 – Letters]**.
3. The Intervention Letters Manager window displays.

3. From the Intervention Letters Manager, press **[F1 – Add Letter]**.
4. A New Intervention Letter form for the selected patient displays, with most details pre-populated by default, as per the patient and intervention details.

Intervention Letter

 **POSTER, Gale (Mr)**
