

Adding a New Travel Advice Intervention

You can add a new travel advice intervention from the Interventions Manager or directly from the patient's PMR.

Travel advice interventions have no severity level.

1. You can access the Interventions Manager from the top left-hand corner of the ProScript Connect Main Screen, by clicking **ProScript Connect** > **Interventions**.
2. From the Interventions Manager, click **[F2 – New Intervention]** and select the *Travel Advice* option.

The screenshot displays the ProScript Connect software interface. The top bar shows the date and time (14 November 2019 09:32) and the user's name (Responsible Pharmacist Victoria Smith). The main area is titled 'Interventions Manager' and shows patient details for MARKS, Connor (Mr), including DOB (15 Oct 1989), NHS No (999 999 9581), and Age (30 years). A dropdown menu for 'F2 - New Intervention' is open, with 'Travel Advice' selected. The interface also includes a search bar, filters, and a list of reporting categories (Anticoagulant Therapy, Lithium Therapy, Prescription Intervention, Travel Advice).

3. The Select Patient to Add Intervention window displays.
4. Search for and select the patient for which you want to add a new intervention record.
5. The Add New Intervention window displays, with the *General* tab selected by default.
6. You can now complete the four tabs of the travel advice intervention.

Completing the General tab

The *General* tab enables you to enter the date the intervention was initiated, type/select who initiated the intervention, select the prescriber and select one or more reporting categories which apply to the intervention.

Add New Intervention

MARKS, Connor (Mr) DOB 15 Oct 1989 NHS No 999 999 9581 PAYING ▼
