

Data Streaming Status

The Data Streaming Status module provides users with an on demand view of secondary data streaming information, including the current streaming status, queued and sent messages, and event dates per branch.

The *Filters* can be used to refine the grid by branch name, and to locate any branches who have not received messages longer than the number of days specified. The details displayed can then be exported to Excel using the **[F2 - Export to Excel]** button.

The screenshot shows the ProScript Connect application window. The main area displays a table of data streaming status for various branches. The table includes columns for Branch Name, Branch Identifier, Secondary Streaming Status, Message(s) in Queue, Sent Messages, Last Activity Date, Last Send Date, and Last HeartBeat Date. The 'Secondary Streaming Status' column shows 'Active' for all listed branches. The interface also includes a search bar, a filter for 'No. of days no messages sent' (set to 0), and buttons for 'F2 - Export to Excel' and 'F5 - Refresh'.
